I. RESEARCH & SCHOLARSHIP

I study how people make meaning to promote healthcare equity in Physical Medicine & Rehabilitation. All my work is purposefully interdisciplinary and collaborative, engaging with stakeholders from multiple scholarly fields, and members of the affected communities we study. One research focus is tailoring peer support interventions for persons with physical disabilities (e.g., peer health navigation). Another is developing meaningful clinical rehabilitation assessments for all

(e.g., health professionals, patients, & care partners). I conduct both empirical work and contribute to methodological and conceptual advances in these fields.

II. TEACHING

My approach to teaching centers around training students to articulate their beliefs, values, and assumptions to support intentional choices related to course material and topics covered in courses. I aspire to create informal and safe settings in which we discuss course material. I challenge & support them to think deeply, emotionally, and to argue using rigorous evidence. I train them to evaluate evidence & appraise multiple perspectives critically. Together, we learn from each other how our socio-historical contingencies have shaped our habits & beliefs as they pertain to course topics (s. a. social determinants of health, disability equity, discrimination).
